USING THE FUEL ECONOMY GUIDE

The U.S. Environmental Protection Agency (EPA) and U.S. Department of Energy (DOE) produce the *Fuel Economy Guide* to help car buyers choose the most fuel-efficient vehicle that meets their needs. The Guide is published in print and on the Web at www.fueleconomy.gov. For additional print copies, please call DOE's Clean Cities Technical Response Service at 1-800-254-6735 or mail your request to: NREL - Fuel Economy Guide, 15013 Denver West Parkway, Golden, CO 80401-3305.

Fuel Economy Estimates

Most vehicles in this Guide (other than plug-in hybrids) have three fuel economy estimates:

- A "city" estimate that represents urban driving, in which a vehicle is started in the morning (after being parked all night) and driven in stop-and-go traffic
- A "highway" estimate that represents a mixture of rural and interstate highway driving in a warmed-up vehicle, typical of longer trips in free-flowing traffic
- A "combined" estimate that represents a combination of city driving (55%) and highway driving (45%)

Estimates for all vehicles are based on laboratory testing under standardized conditions to allow for fair comparisons.

Flexible-fuel vehicles (FFVs), which can use gasoline and E85, have estimates for both fuels. Plug-in hybrid electric vehicles (PHEVs) have estimates for (1) electric-only or blended electric and gasoline operation and (2) gasoline-only operation and are discussed in more detail on page 26. For answers to frequently asked questions about fuel economy estimates, visit www.fueleconomy.gov.

Annual Fuel Cost Estimates

This Guide provides annual fuel cost estimates, rounded to the nearest \$50, for each vehicle. The estimates are based on the assumptions that you travel 15,000

miles per year (55% under city driving conditions and 45% under highway conditions) and that fuel costs \$3.75/gallon for regular unleaded gasoline and \$4.04/gallon for premium. Cost-per-gallon assumptions for vehicles that use other fuel types are discussed at the beginning of those vehicle sections. The fuel costs were determined in advance to allow time for printing fuel economy labels and the Guide, and may not reflect current fuel prices.

Visit www.fueleconomy.gov to personalize fuel costs based on current fuel prices and your driving habits.

Your Fuel Economy Will Vary

Even though EPA recently improved its methods for estimating fuel economy, your vehicle's fuel economy will almost certainly vary from EPA's estimate. Fuel economy is not a fixed number; it varies significantly based on where you drive, how you drive, and other factors. Thus, it is impossible for one set of estimates to predict fuel economy precisely for all drivers in all environments. For example, the following factors can lower your vehicle's fuel economy:

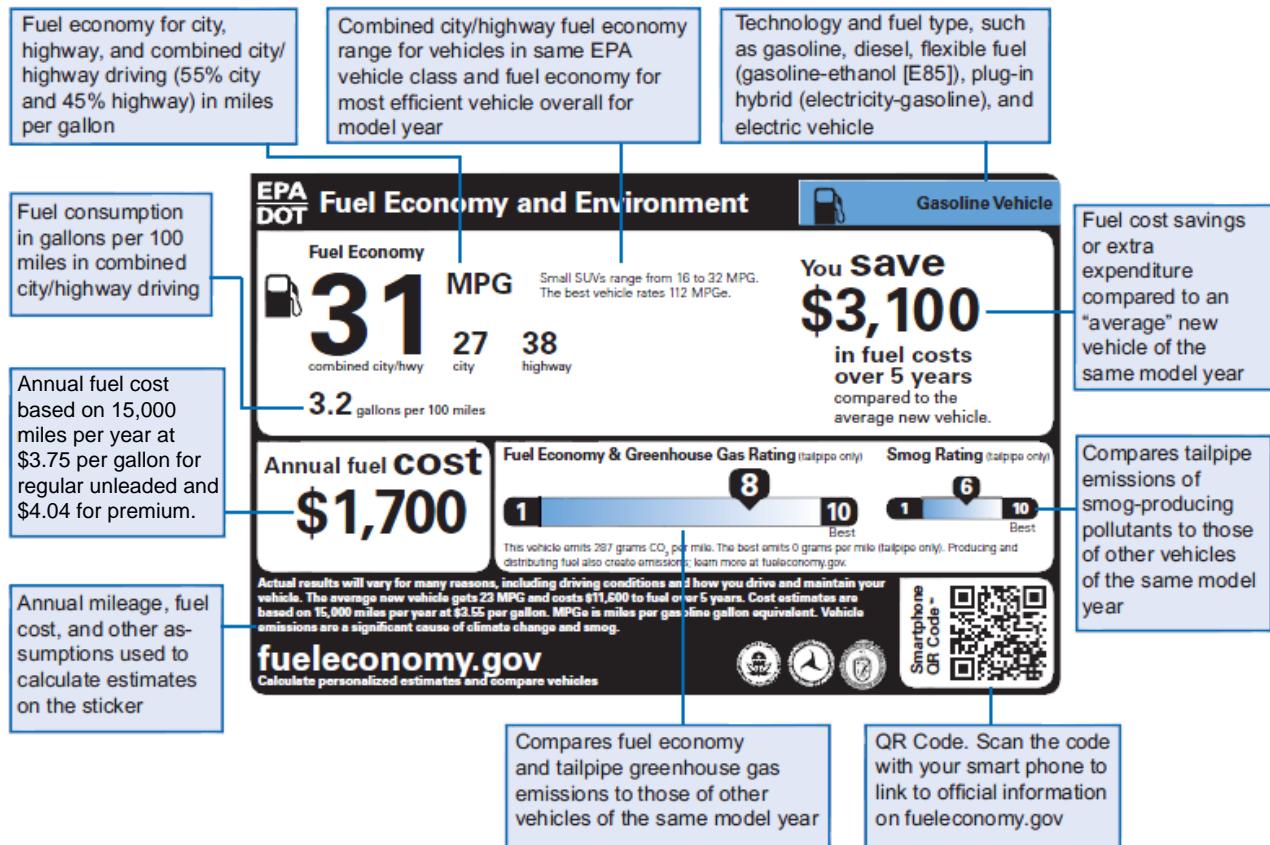

- Aggressive driving (hard acceleration and braking)
- Excessive idling, accelerating, and braking in stop-and-go traffic
- Cold weather (engines are more efficient when warmed up)
- Driving with a heavy load or with the air conditioner running
- Improperly tuned engine or under-inflated tires
- Use of remote starters

In addition, small variations in vehicle manufacturing can cause fuel economy variations in the same make and model, and some vehicles don't attain maximum fuel economy until they are "broken in" (around 3,000–5,000 miles).

So, please remember that the EPA ratings are a useful tool for comparing vehicles when car buying, but they may not accurately predict the fuel economy you will get. This is also true for annual fuel cost estimates. For more information on

GETTING TO KNOW THE NEW FUEL ECONOMY AND ENVIRONMENT LABEL

EPA recently redesigned the Fuel Economy and Environment labels that must be affixed to new vehicles starting with the 2013 model year—some manufacturers also adopted the new label for model year 2012 vehicles. The example below shows a sample label for a gasoline vehicle. Slightly different designs are used for flexible-fuel vehicles, electric vehicles, and plug-in hybrids. For more in-depth descriptions of label information for all vehicle types, visit www.fueleconomy.gov.

New Label Features

Fuel Consumption Rate

This shows fuel use in gallons per 100 miles (kilowatt-hours per 100 miles for vehicles using electricity).

Fuel Economy & Greenhouse Gas Ratings

Vehicles are assigned a rating from 1 (worst) to 10 (best) for fuel economy and greenhouse gas (GHG) emissions. The GHG rating that appears on the labels (window stickers) will be the same as the fuel economy rating for gasoline operation. Vehicles using other fuels are rated separately based on their fuel economy and carbon dioxide (CO₂) emissions and thus may have different GHG and fuel economy ratings on their labels. For flexible fuel vehicles, GHG ratings for ethanol (E85) as well as gasoline operation are listed at www.fueleconomy.gov.

The GHG rating does not account for emissions generated "upstream" of the

vehicle (e.g., electricity production). Visit www.fueleconomy.gov for more about upstream emissions.

Below the rating scale, the label also provides an estimate for the amount of CO₂ per mile emitted by that specific vehicle along with an estimate of the CO₂ emissions for the best vehicle in that model year.

Smog Rating

Vehicles are assigned a rating from 1 (worst) to 10 (best) for tailpipe emissions of pollutants that cause smog and other local air pollution. For those vehicles that run on electricity, the tailpipe emissions are zero.

5-Year Fuel Cost Savings

This measure shows how much more or less it will cost to fuel the vehicle over 5 years (rounded to the nearest \$50) compared to an "average" new vehicle of the same model year. For the 2013 model year, EPA estimates that the average new vehicle will get 23 mpg.

Smartphone QR Code

You can use a smartphone equipped with a scanner "app" to scan this code and access additional information about the vehicle on www.fueleconomy.gov. On www.fueleconomy.gov, you can also personalize your fuel economy, emissions, and cost estimates based on your local fuel prices and driving habits.

Information for Electric Plug-in Vehicles

The new label also includes information on charge time and driving range for plug-in hybrids and electric vehicles.

UNDERSTANDING THE GUIDE LISTINGS

We hope you'll find the *Fuel Economy Guide* easy to use! Fuel economy and annual fuel cost data are organized by vehicle class (see page 3 for a list of classes). Within each class, vehicles are listed alphabetically by manufacturer and model.

Vehicle models with different features, such as engine size or transmission type, are listed as different vehicles. Engine and transmission attributes are shown in the first column under the model name.

Additional attributes needed to distinguish among vehicles (e.g., fuel type, suggested fuel grade) are listed in the "Notes" column. A legend for abbreviations is provided on page 6.

A "P" in the "Notes" column indicates that the manufacturer *recommends* that the

vehicle be fueled with premium-grade gasoline, and a "PR" indicates that the manufacturer *requires* premium. The higher price of premium fuel is reflected in the annual fuel cost of these vehicles.

The most fuel-efficient vehicles in each class and alternative fuel vehicles are indicated with special markings (see diagram below). Vehicles that can use more than one kind of fuel have an entry for each fuel type.

Interior passenger and cargo volumes are located in the index at the back of the Guide.

WHY SOME VEHICLES ARE NOT LISTED

Light-duty fuel economy regulations do not apply to

- Sport utility vehicles (SUVs) and passenger vans with a gross vehicle

weight rating (GVWR) of more than 10,000 pounds—GVWR is the vehicle weight plus carrying capacity

- Other vehicles with a GVWR of 8,500 pounds or more or a curb weight over 6,000 pounds

Therefore, manufacturers do not have to estimate their fuel economy, and fuel economy labels are not posted on their windows.

Also, fuel economy information on some vehicles is not available in time to be printed in the Guide. However, you can find more up-to-date information at www.fueleconomy.gov.

Sample Vehicle Listing (Not Actual Data)								
Manufacturer	Model	Manufacturer Model Configuration (trans, eng size, cyl)	MPG		Annual Fuel Cost	GHG Rating	Notes	
			City/Hwy	Comb				
MITSUBISHI	i-MiEV	A-1	126/99	112	\$550	10	EL	
MINI								
John Cooper Works Clubman								
A-S6, 1.6L, 4cyl		26/34	29	\$1,950	8	PT	Additional information to help further identify the vehicle (e.g., engine and fuel system info) along with other useful information about taxes, required fuel grade, etc. EXAMPLE: P=Premium Gasoline Recommended, T=Turbocharger

BUICK								
Regal								
A-S6, 2.0L, 4cyl		19/27	22	\$2,400	5	T	Estimated annual fuel cost, assuming 15,000 miles of travel a year (55% city and 45% highway) and an average fuel price	
M-6, 2.0L, 4cyl		19/27	22	\$2,400	5	T		
Regal FFV								
A-S6, 2.0L, 4cyl		18/29	22	\$2,400	5	Gas T	Flexible fuel vehicles (FFVs) can run on gasoline or E85 (a mixture of 85% ethanol & 15% gasoline).	
13/20		15		\$3,100	5	E85		
Engine size (in liters) followed by number of cylinders. EXAMPLE: 2.0-liter, 4-cylinder engine								

VEHICLE CLASSES USED IN THIS GUIDE

CARS		TRUCKS	
CLASS	Passenger and Cargo Volume (cu. ft.)	CLASS	Gross Vehicle Weight Rating* (pounds)
TWO SEATERS		PICKUP TRUCKS	
SEDANS		Small	Under 6,000
Minicompact	Under 85	Standard	6,000 to 8,500
Subcompact	85 to 99		
Compact	100 to 109	VANS	
Midsized	110 to 119	Passenger	Under 10,000
Large	120 or more	Cargo	Under 8,500
STATION WAGONS		MINIVANS	Under 8,500
Small	Under 130	SPORT UTILITY VEHICLES	
Midsized	130 to 159	Small	Under 6,000
Large	160 or more	Standard	6,000 to 9,999
		SPECIAL PURPOSE VEHICLES	Under 8,500

*Gross vehicle weight rating = vehicle weight plus carrying capacity

TAX INCENTIVES AND DISINCENTIVES

Federal Tax Credits

You may be eligible for a federal income tax credit of up to \$7,500 if you purchase a qualifying electric or plug-in hybrid vehicle in 2012–13.

Visit www.fueleconomy.gov for more information on qualifying models, credit amounts, and phase-out dates.

Gas Guzzler Tax

The Energy Tax Act of 1978 requires auto companies to pay a "gas guzzler" tax on the sale of cars with exceptionally low fuel economy. Such vehicles are identified in the Guide by the word "Tax" in the "Notes" column. In the dealer showroom, the words "Gas Guzzler" and the tax amount are listed on the vehicle's fuel economy label. The tax does not apply to light trucks.

WHY CONSIDER FUEL ECONOMY?

Save Money

You could save as much as \$1,700 in fuel costs each year by choosing the most fuel-efficient vehicle in a particular class. This can add up to thousands of dollars over a vehicle's lifetime. Fuel-efficient models come in all shapes and sizes, so you need not sacrifice utility or size.

Each vehicle listing in the *Fuel Economy Guide* provides an estimated annual fuel cost (see page i). The online guide at www.fueleconomy.gov features an annual fuel cost calculator that allows you to insert your local gasoline prices and typical driving conditions (percentage of city and highway driving) to obtain the

most accurate fuel cost information for your vehicle.

Reduce Oil Dependence Costs

Buying a more fuel-efficient vehicle can help reduce our dependence on petroleum. About 45% of the oil used to produce the gasoline you put in your tank is imported. The United States uses about 19 million barrels of oil per day, two-thirds of which is used for transportation. Oil dependence cost the U.S. economy around \$500 billion in 2011 alone.

Reduce Climate Change

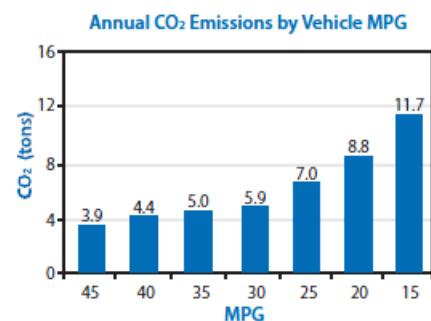

Climate change is widely viewed as the most significant long-term threat to the global environment, and human-made emissions of greenhouse gases (GHGs) are very likely the cause of most of the observed global warming over the last 50 years.

Burning fossil fuels such as gasoline and diesel releases carbon dioxide (CO₂) and other GHGs into the atmosphere, contributing to global climate change. CO₂ is the most important human-made GHG, and highway vehicles account for roughly a quarter (1.6 billion tons) of U.S. CO₂ emissions each year.

Every gallon of gasoline your vehicle burns puts about 20 pounds of CO₂ into the atmosphere; the average vehicle emits around 5 to 8 tons of CO₂ each year. Unlike other forms of vehicle pollution, CO₂ emissions cannot be reduced by pollution control technologies. They can only be reduced by burning less fuel or by burning fuel that contains less carbon.

One of the most important things you can do to reduce your contribution to climate change is to buy a vehicle with better fuel economy. Switching from a vehicle that gets 20 mpg to one that gets 25 mpg can

reduce CO₂ emissions by 10 tons over the vehicle's lifetime, more than a year's worth of use.

You can also reduce your contribution to climate change by

- Getting the best fuel economy out of your car
- Using a low-carbon fuel, such as compressed natural gas (CNG) or electricity from a renewable resource such as wind or hydropower
- Walking, biking, or taking public transit more often

FUELING OPTIONS

Ethanol Blends – E85 and E10

Ethanol is a domestically produced, renewable fuel made primarily from starch-based crops such as corn. It may also be made from "cellulosic biomass," such as crop residues and wood, but this is not yet done on a large scale. The use of ethanol as a vehicle fuel can reduce greenhouse gas emissions and U.S. dependence on petroleum.

E10 is a blend of 10% ethanol and 90% gasoline and is legal for use in any

FUEL ECONOMY AND ANNUAL FUEL COST RANGES FOR VEHICLE CLASSES

gasoline-powered vehicle. More than 95% of U.S. gasoline contains up to 10% ethanol to boost octane, meet air quality requirements, or satisfy the Renewable Fuel Standard.

E85 is a high-level ethanol-gasoline blend containing 51% to 83% ethanol, depending on the season and geographic location. Drivers can use E85 in flexible fuel vehicles (FFVs), which are specially designed to run on gasoline, E85, or any mixture of the two. FFVs are offered by several vehicle manufacturers. To determine whether your vehicle is an FFV, check the inside of your car's fuel filler door for an identification sticker or consult your owner's manual. More than two thousand filling stations in the United States currently sell E85. Visit afdc.energy.gov/locator/stations/ to find stations near you.

There is no noticeable difference in vehicle performance when low-level ethanol blends are used. However, FFVs operating

on E85 usually experience a 25–30% drop in fuel economy due to ethanol's lower energy content relative to gasoline.

Biodiesel

Biodiesel is a domestically produced renewable fuel manufactured from vegetable oils or animal fats for use in diesel vehicles. Using biodiesel in place of petroleum diesel reduces greenhouse gas emissions and contributes to national energy security.

Biodiesel

Biodiesel can be blended with petroleum diesel at any percentage. The most common biodiesel blend is B20, which contains 20% biodiesel and 80% petroleum diesel. B5 (5% biodiesel and 95% petroleum diesel) is another common blend. All vehicle manufacturers have approved biodiesel blends up to and including B5 for use in all diesel engines. However, using higher-level biodiesel blends may affect vehicle warranties. Check your owner's manual or with your

vehicle manufacturer to determine the right blend for your vehicle.

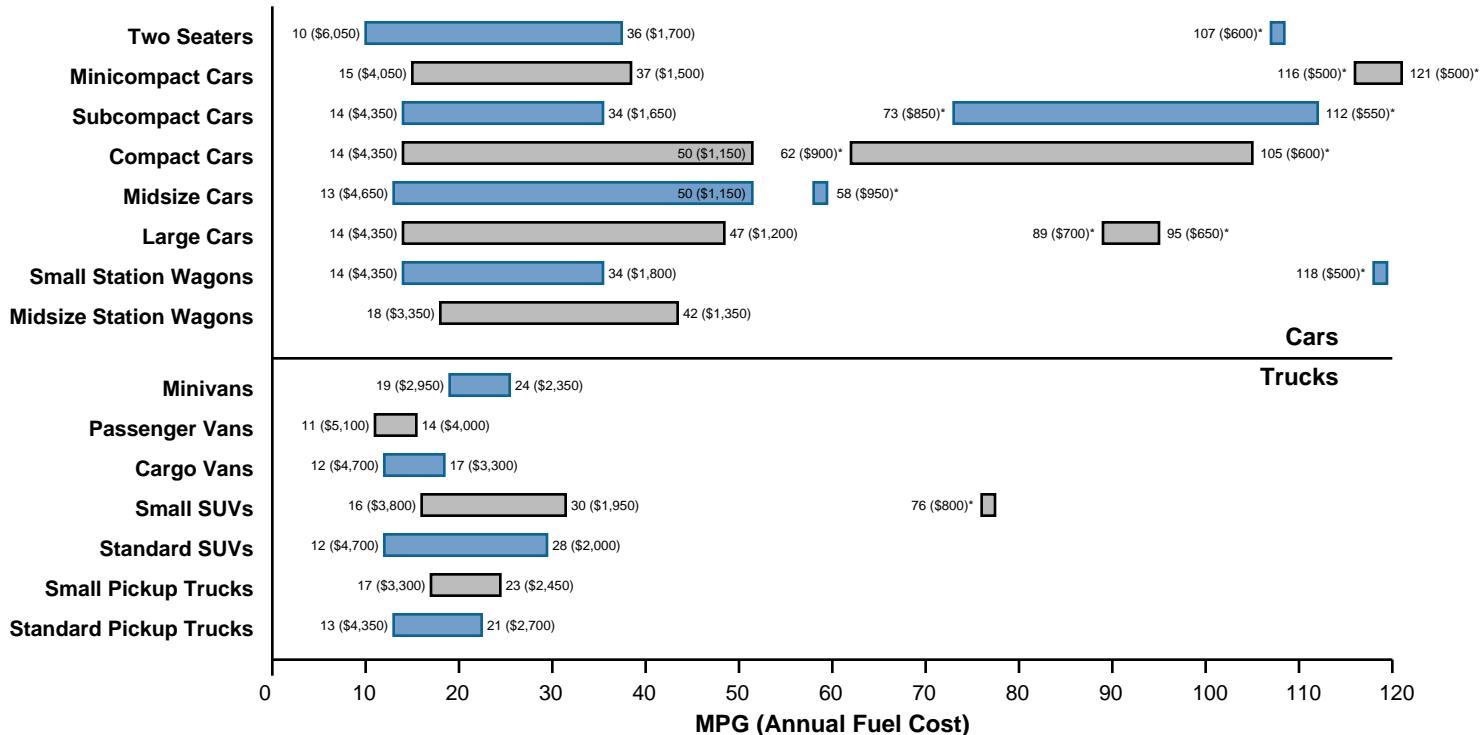

Purchase commercial-grade biodiesel from a reputable dealer. Never refuel with recycled grease or vegetable oil that has not been converted to biodiesel. It will damage your engine.

More than 250 stations currently dispense B20. Visit afdc.energy.gov/locator/stations/ to find service stations selling biodiesel near you.

Premium- vs Regular-Grade Gasoline

Regular unleaded is the recommended gasoline for most cars. Using a higher octane gasoline than recommended by the owner's manual does not improve performance or fuel efficiency; it only costs more money. Check your owner's manual to determine the lowest grade of fuel you can use.

The graph below provides the fuel economy and annual fuel cost ranges for the vehicles in each class so you can see where a given vehicle's fuel economy and cost fall within its class. Combined city and highway MPG estimates are used; these assume you will drive 55% in the city and 45% on the highway. Annual fuel costs assume that you travel 15,000 miles each year and fuel costs \$3.75/gallon for regular unleaded gasoline, \$4.04/gallon for premium, \$4.16/gallon for diesel, and \$0.12/kWh for electricity. Visit www.fueleconomy.gov to calculate the annual fuel cost for a specific vehicle based on your own driving conditions and fuel prices.

Fuel economy estimates on this chart do not include vehicles operating on compressed natural gas (CNG), hydrogen, or E85.

* Represents electric vehicles and plug-in hybrids. Fuel economy values for these vehicles are in miles per gallon gasoline equivalent (MPGe).

MODEL YEAR 2013 FUEL ECONOMY LEADERS

Listed below are vehicles with the highest fuel economy in the most popular classes. For each vehicle class we list the most fuel efficient conventional vehicle, and the most efficient plug-in hybrid (PHEV) or electric (EV). Rankings are based on combined city and highway fuel economy estimates which assume 55% city driving and 45% highway driving. Please note that many vehicle models come in a range of engine sizes and trim lines, resulting in different fuel economy values. If there is only one vehicle in the class, we do not list a fuel economy leader.

	Trans Type/ Speeds	Eng Size / Cylinders	MPG Combined		Trans Type/ Speeds	Eng Size / Cylinders	MPG Combined

* This is an electric vehicle. Since electricity is not measured in gallons, a conversion factor is used to translate the fuel economy into miles per gallon of gasoline equivalent (MPGe).

† This vehicle is a plug-in hybrid, which runs on both gasoline and electricity. Since electricity is not measured in gallons, a conversion factor is used to translate the fuel economy when running on electricity into miles per gallon of gasoline equivalent (MPGe). The Combined MPGe estimate includes both city and highway driving and gasoline and electric energy use.

‡ When operated on gasoline.

2013 MODEL YEAR VEHICLES

This section contains the fuel economy values for 2013 model year vehicles. Additional information for alternative fuel vehicles can be found on pages 26, 27 and 29–34. Alternative fuel vehicles are highlighted with a blue bar, and those that can use two kinds of fuel, such as flexible fuel vehicles, have an entry for each fuel type. The most fuel-efficient vehicles per class are listed in blue boldface type and marked with a blue pointer (►).

DIESEL VEHICLES

Diesel-powered vehicles typically get 30–35% more miles per gallon than comparable vehicles powered by gasoline. Diesel engines are inherently more energy efficient, and diesel fuel contains 10% more energy per gallon than gasoline. In addition, new advances in diesel engine technology have improved performance, reduced engine noise and fuel odor, and decreased emissions of harmful air pollutants. Ultra-low sulfur diesel fuels also help reduce emissions from these vehicles.

Annual fuel costs below are estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a diesel fuel cost of \$4.16 per gallon.

ELECTRIC VEHICLES

Electric vehicles (EVs), also called battery electric vehicles (BEVs), are propelled by one or more electric motors powered by rechargeable battery packs. EVs are energy-efficient and reduce our dependence on petroleum since electricity is produced from domestic resources. They emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Electric motors have several performance benefits. They are quiet, have instant torque for quick acceleration, and require less maintenance than internal combustion engines.

Current EVs have a shorter driving range than gasoline or hybrid vehicles, and their range is more sensitive to driving style, driving conditions, and accessory use. Fully recharging the battery pack

can take several hours—though a “quick charge” to 80% capacity may take as little as 30 minutes—and options for charging the vehicle away from home may be limited. EVs are also more expensive than conventional vehicles and hybrids due to the cost of the large battery packs. Still, manufacturers are working hard to improve the driving range and reduce the cost of these vehicles, and public charging stations may become more common in the future.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying EV. Visit www.fueleconomy.gov for additional information on EVs, including tax incentives.

PLUG-IN HYBRID ELECTRIC VEHICLES

Plug-in hybrid electric vehicles (PHEVs) are hybrids with high capacity batteries that can be charged by plugging them into an electrical outlet or charging station. PHEVs can store enough electricity from the power grid to significantly reduce their petroleum consumption under typical driving conditions.

There are two basic PHEV configurations:

- Series PHEVs, also called Extended Range Electric Vehicles (EREVs).** The electric motor on these vehicles is the only power source that turns the wheels; the gasoline engine only generates electricity. Series PHEVs can run solely on electricity until the battery needs to be recharged. The gasoline engine will then generate the electricity needed to power the electric motor. For short trips, these vehicles may not use any gasoline.
- Parallel or Blended PHEVs.** Both the engine and electric motor are mechanically connected to the wheels, and both may propel the vehicle. The vehicle may operate using both electricity and gasoline at the same time, using electricity only, or using gasoline only.

PHEVs also have different battery capacities, allowing some to travel farther on electricity than others. PHEV fuel economy, like that of EVs and regular hybrids, can be sensitive to driving style, driving conditions, and accessory use. When operating in pure electric mode, PHEVs emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Charging a PHEV's battery typically takes several hours, but a "quick charge" to 80% capacity may take 30 minutes or less. However, PHEVs don't have to be plugged in to be driven. They can be fueled solely with gasoline, like a conventional hybrid, but will not achieve maximum range or fuel economy without charging.

PHEVs use less petroleum and cost less to fuel than conventional hybrids, but they are more expensive to purchase.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying PHEV. Visit www.fueleconomy.gov for additional information on PHEVs, including tax incentives.

HYBRID-ELECTRIC VEHICLES

It's no coincidence that some of the most fuel-efficient vehicles for the 2013 model year are hybrid-electric vehicles (HEVs). Hybrids combine the best features of the internal combustion engine with an electric motor and can significantly improve fuel economy without sacrificing performance or driving range. HEVs may also be configured to provide increased performance.

HEVs are primarily propelled by an internal combustion engine, just like conventional vehicles. However, they also convert energy normally wasted during coasting and braking into electricity, which is stored in a battery until needed by the electric motor. The electric motor assists the engine when accelerating or hill climbing and at low speeds where internal combustion engines are least efficient. Unlike all-electric vehicles, HEVs do not need to be plugged into an external source of electricity to be recharged; conventional gasoline and regenerative braking provide all of the energy that the vehicle needs.

Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a fuel cost of \$3.75 per gallon for regular unleaded gasoline or \$4.04 for premium gasoline.

COMPRESSED NATURAL GAS VEHICLES

Compressed natural gas (CNG) vehicles produce fewer smog-forming and greenhouse gas pollutants and reduce our dependence on petroleum. CNG fuel is normally dispensed in "equivalent gallons," where one equivalent gallon is equal to 121.5 std. cu. ft. of natural gas. Therefore, the fuel economy values are shown in miles per gasoline equivalent (MPGe). Annual fuel cost estimates are based on an average fuel price of \$2.12 per gasoline equivalent gallon of CNG. The driving range is shown in miles and represents the distance the vehicle can travel on a full tank (or tanks) of fuel during combined city and highway driving (55% city and 45% highway).

FUEL CELL VEHICLES

Fuel cell vehicles (FCVs) may not reach the mass market for a decade or more, but a limited number will be available for sale or lease in 2012-13 to demonstration fleets in areas with a readily accessible hydrogen supply. FCVs are propelled by electric motors powered by fuel cells, which produce electricity from the chemical energy of hydrogen. Fuel cell technology is more efficient than internal combustion engines and environmentally cleaner—the only by-product of a hydrogen fuel cell is water. However, many challenges must be overcome before FCVs are mass-marketed and sold at local dealerships. For more information about FCVs, visit www.fueleconomy.gov and the Fuel Cell Technologies Program Web site at www.eere.energy.gov/hydrogenandfuelcells/.

HONDA					
FCX Clarity	PEM	Permanent Magnet 100kW AC	288V Li-Ion	Hydrogen	NA

PEM = Proton Exchange Membrane or Polymer Electrolyte Membrane.

ETHANOL FLEXIBLE FUEL VEHICLES

Ethanol flexible fuel vehicles (FFVs) are designed by the original manufacturer to operate on gasoline, E85, or any mixture of the two fuels. Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and an average fuel cost of \$3.47 per gallon for E85, \$3.75 per gallon for regular unleaded gasoline, and \$4.04 per gallon for premium unleaded gasoline. The price of ethanol is highly variable from region to region; it is typically lower in the Midwestern United States and higher in other areas. Therefore, actual consumer experience may differ significantly from the annual fuel cost estimate presented here.

Fuel economy and driving range values are shown for both gasoline and E85. When operating your FFV on mixtures of gasoline and E85, such as when alternating between using these fuels, your driving range and fuel economy values will be somewhere between those listed for the two fuels, depending on the actual percentage of gasoline and E85 in the tank.

IMPROVE YOUR FUEL ECONOMY

Drive More Efficiently

- Aggressive driving (speeding and rapid acceleration and braking) can lower your gas mileage by as much as 33% at highway speeds and 5% around town.
- Observe the speed limit. Each 5 MPH you drive over 60 MPH can reduce your fuel economy by 7%.

- Avoid idling. Idling gets 0 miles per gallon and costs you as much as \$0.04 per minute.
- Using cruise control on the highway helps you maintain a constant speed and, in most cases, will save gas.

Keep Your Car in Shape

- Fixing a car that is noticeably out of tune can improve gas mileage by about 4%.
- Keeping tires inflated to the recommended pressure and using the recommended grade of motor oil can improve fuel economy by up to 5%.

The manufacturer's recommended tire pressure can be found on the tire information placard and/or vehicle certification label located on the vehicle door edge, doorpost, glove-box door, or inside the trunk lid.

- Keep your tires aligned and balanced.
- Replacing a clogged air filter can improve gas mileage on older cars with carbureted engines.

Plan and Combine Trips

- A warmed-up engine is more fuel-efficient than a cold one. Many short trips taken from a cold start can use twice as much fuel as one multipurpose trip covering the same distance.

Note: Letting your car idle to warm up doesn't help your fuel economy; it actually uses more fuel and creates more pollution.

Other Solutions

- Avoid carrying unneeded items. An extra 100 lbs. can decrease fuel economy by 1–2%.
- A roof rack or carrier provides additional cargo space and may allow you to meet your needs with a smaller car. However, a loaded roof rack can decrease your fuel economy by 5%.

Reduce aerodynamic drag and improve your fuel economy by placing items inside the trunk whenever possible.
